## Diuretics and masking agents

Diuretics, which increase the production of urine, and masking agents, chemical compounds which interfere with drug tests, are banned for two reasons. First, by decreasing water retention and thus decreasing an athlete's weight, an important consideration in many speed sports (e.g. track and field, speed skating), they increase the speed of an athlete. Secondly, increased urine production depletes the concentration of both the banned drugs and their metabolites, making their detection more difficult. Masking agents, on the other hand, work by making drug tests ineffective, leading to false-negative results. Desmopressin, plasma expanders (such as glycerol; intravenous administration of albumin, dextran, hydroxyethyl starch and mannitol), probenecid, and other substances with similar biological effects are also banned. Local application of felypressin in dental anesthesia is not prohibited.

## Diuretics

The following diuretics, and chemicals with similar structure or biological activity are banned:

Acetazolamide

Amiloride

Bendroflumethiazide

Bumetanide

Canrenone

Chlorthalidone

Chlorothiazide

Etacrynic acid

Furosemide

Hydrochlorothiazide

Indapamide

Metolazone

Spirolactone

Triamterene

## Narcotics and cannabinoids

Narcotic analgesics decrease the painful sensations of serious injuries, potentially allowing athletes to continue training for competition after an injury. While some painkillers are allowed, including codeine, the following are banned:

Buprenorphine

Dextromoramide

Diamorphine (heroin)

Fentanyl and its derivatives

Methadone

Morphine

Oxycodone

Oxymorphone

Pentazocine

Pethidine

## Natural and synthetic cannabinoids

The following are banned for in-competition use only, with the exception of cannabidiol (CBD) which is not banned for any use.[2] In 2013, the level of THC metabolite allowed was changed from 15 ng/mL to 150 ng/mL so as to only detect in-competition use.[10]

In cannabis (hashish, marijuana) and cannabis products

Synthetic cannabinoids that mimic the effects of THC

## Natural and synthetic tetrahydrocannabinols (THCs)

## Glucocorticoids

Glucocorticoids are a class of corticosteroids that affect the metabolism of carbohydrates, fat, and proteins, and regulate glycogen and blood pressure levels. They possess pronounced anti-inflammatory activity and cause alteration of connective tissue in response to injuries. The anti-inflammatory and connective tissue effects of glucocorticoids might mask injuries, leading to more serious injuries to athletes. Because of this and metabolic regulation effects, the administration of any glucocorticoid orally, rectally, intravenously, or intramuscularly is prohibited and requires a therapeutic use exemption. Topical uses of glucocorticoids does not require an exemption.

## Beta blockers

Beta blockers are prohibited during competition in a number of sports; out of competition, they are prohibited only in archery and shooting. The prohibited beta blockers include:

Acebutolol

Alprenolol

Atenolol

Betaxolol

Bisoprolol

Bunolol

Carteolol

Carvedilol

Celiprolol

Esmolol

Labetalol

Levobunolol

Metipranolol

Metoprolol

Nadolol

Oxprenolol

Pindolol

Propranolol

Sotalol

Timolol
